Medical Selection Of Life Risks

Synopsis

Medical Selection of Life Risks has long been recognised as the reference book on insurance medicine. The fourth edition provides a comprehensive guide to life expectancy for underwriters and clinicians involved in the life insurance industry. Extensively revised and expanded the 4th edition of Medical Selection of Life Risks reflects developments in life and healthcare insurance as well as medicine. There are completely new chapters: on the underwriting of genetic diseases, disability underwriting, impaired lives annuities, musculoskeletal and soft tissue disorders. Several major chapters have been completely re-written, including respiratory, ischemic and congenital heart diseases and oncology. Part I - deals with the principles of life and disability insurance and the logistics of life underwriting. Part II - is devoted to a systematic clinical appraisal of underwriting problems, mainly relating to life insurance but also, where appropriate, to disability, critical illness and long term care insurance.

Customer Reviews

This is the only book in its field, the first edition was introduced in 1962. This completely rewritten fourth edition gives a comprehensive review of basis principles in insurance and disability medicine and whilst primarily written from a life insurance background, gives valuable information to all practising doctors who want a numerical basis for outcomes of diseases and disorders in their patients. Thus it follows Hipocrates basic tenants on the importance of expected outcomes in diseases. The book has been widely accepted in Medico-legal circles.
